Hose fittings are primarily used to connect moving parts to fixed parts of an aircraft, where they are subjected to vibration and therefore require great flexibility. There are two main types of hose fittings used in aircraft. They are flexible and non-flexible. They are made of various materials, such as metal, rubber, etc. . Typically, manufacturers develop flexible hoses using butyl, nitrile rubber, EPDM and neoprene. These hose fittings are used for coolant, oil, fuel and hydraulic systems.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
