## **Abstracts**

This report focuses on Aircraft Predictive Maintenance market.

Predictive maintenance involves the use of information such as sensor data and maintenance logs to predict maintenance needs in advance, helping airlines carry out better maintenance planning. Making use of predictive maintenance can offer real and widespread advantages to companies who can best figure out how to leverage their data and reap the benefits. Over the last decade, a number of developments have laid the groundwork for predictive maintenance readiness: improved computational power, data storage capabilities as well as the overall amount of data and data parameters the industry can look to – thanks to the widely adopted use of sensors on aircraft and high-quality data routers.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Aircraft Predictive Maintenance market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
