Abstracts

A truss is a structure that consists of two-force members only, where the members are organised so that it behaves as a single object. The primary materials most commonly used for stage lighting trusses are Aluminum and Steel. Aluminum, because of its durability, light weight and ease of transport, is the optimum choice for use in concert or stage production. Its weight allows for a quick and easy setup and teardown.

The top five bands of Global Truss, Eurotruss, James Thomas Engineering, Prolyte Group and Milos account for less than 20% revenue market share in 2018.
