Abstracts

Aluminium Extrusion Die is used for Aluminium Extrusion. Aluminium Extrusion is technically possible to obtain the desired shape by heating the designed mold and then placing it in front of the press housing to have a heat treatment at controlled level, then the desired profile shape pass through the pressure-resultant mold applied by the stamp, the profile is cooled in the conveyor to be subjected to the cutting process to have it in requested sizes and finally the process is completed by having the the cutting profiles placed into the thermal furnace to have the aging process and then hardening. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
