## Abstracts

The ammonia gas analyzer detection principle generally has the semiconductor or the electrochemical principle sensor. The sampling method is divided into the pump-suction type and diffusion type. The ammonia detector is mainly composed of sampling, detection, indication, and alarm, the sensor converts the ammonia concentration into an electrical signal of a certain size, and then the concentration value is displayed by the display.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
