Amniotic membrane is the innermost film developing the fetal membranes. It comprises stroma, epithelium and basement membrane. Amniotic membrane consists of three layers including fibroblast layer, compact layer and an outer layer. It has the ability to enhance healing therefore it is utilized in surgical operations related to skin, brain and head and neck. Amniotic membrane can also use as a dressing in order to ease ocular surface and enhance healings for various ailments. Amniotic membrane is obtained from human placenta. The amniotic membrane comprises of proteins that are used for tissue regeneration, corneal disorders and other treatment applications. Amniotic membrane has anti-inflammatory and anti- scarring effects.
