A highly concentrated source of boric oxide for glazes (which also brings Na₂O, it is sodium borate). Anhydrous borax is made by fusing hydrated borax into a glass and regrinding it. It thus contains little or no water of crystallization. The powder does not rehydrate under normal dry storage conditions. It is somewhat water soluble, but considerably less so than raw borax (in aqueous solution it can thus provide slow release of boron).

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Anhydrous Borax market in 2020.
