Abstracts

Anisotropic Conductive Paste (ACP) is a liquid material consisting of electroconductive particles uniformly dispersed within a highly-insulating adhesive component. A functional material, ACP produces an anisotropic conductive film through application and drying in the screen-printing process. It is capable of achieving all three of the following actions at a physical junction through a heat press process for several ten seconds: (1) forming an electric connection between electronic components; (2) retaining insulation between adjacent electrodes; and (3) bonding and fixing. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Anisotropic Conductive Paste (ACP) market in 2020.
