Application transformation is an umbrella term that encompasses everything from reducing the number of applications within an enterprise to moving applications to the cloud to ensuring that apps meet updated compliance and governance requirements. The transformation process often involves the establishment of an application portfolio and management program.

Evolving customer needs are forcing companies to innovate quickly. However, most developers in the world are still using old tools to handle legacy applications on obsolete platforms. Wanting to migrate to the cloud is often hampered by a combination of complex applications that are tightly coupled and missing documents. Moreover, companies are filled with manual, cumbersome processes designed to minimize risk and maintain compliance, which is the most important impediment. As a result, software can't be released frequently, and publishing is extremely time consuming.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Application Transformation market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
