Abstracts

Atmospheric furnaces are also stated as controlled atmosphere furnace which is used to accommodate wide processing areas where inert atmosphere is required to protect heating samples that are ready to oxidize. These units are employed in application such as bonding, curing and heat treating. Each unit contains digital PID controller, which is used to confirm the higher level of temperature accuracy while working all the time. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Atmospheric Furnace market in 2020.
