Abstracts

This report focus on Auto Rotary Polishers market. The rotary is often considered to be the adversary of the Dual Action polisher. It is a polishing machine that uses only 1 type of motion to create a polishing effect. It is very good at cutting, works quicker then a DA, but also requires much more experience and knowledge to use properly. Rotary Polishers are very straightforward – the head spins on a single axis in a regular circular motion. This causes heat and friction to build up allowing the user to perform paint correction processes. Rotary Polishers will remove marks in paintwork that dual action polishers cannot.

Rotary polishers have a direct polishing action, allowing the user to remove deeper scratches and more serious paintwork imperfections. A Rotary polisher is the ideal choice for the professional detailer or the serious car care enthusiast.
