Abstracts

Automated Conveyor Sorting Systems are the mission-critical conduits for transporting, directing and routing product flows through busy manufacturing and fulfillment environments. While conveyors are essential for moving product from one area of a facility to the next, sortation systems separate products for induction into individual lanes typically associated with an outbound destination. Various types of Conveyor Sortation System are often connected to comprise a fully functioning material handling solution.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
