## Abstracts

A stretch blow molding machine is used to produce containers made of PET, PP and so on. The preforms are heated and then fed into a blow mould where compressed air is used to inflate and form them into finished containers. Stretch blow molding machine can be divided into two types, automatic type as well as the semi-automatic type. The difference between the two types lies in the treatment of reheated preforms. The former delivers the preforms to the moulds via machines while the latter one needs workers.
