Abstracts

Coolant also called anti-freeze, is a bright yellow or green fluid substance that blends with the water added to vehicles both diesel and gasoline to keep the engine operating at a proper temperature and prevent freezing or overheating. Coolant is made either from ethylene glycol, or propylene glycol is capable of altering the boiling point or freezing point of the liquid. Lubricant is in various forms such as oils, greases, and dry lubricants it cleanses the inner part of the engine by getting rid of pollutants such as metal, dust, plastic, gum, and other dirt. Absorbs jolts between moving surfaces and makes the engine operate quietly which in turn also increases the engine's lifespan. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
