## **Abstracts**

Barium chloride Anhydrous is white powder or particle. It is soluble in water, and slightly soluble in hydrochloric acid and nitric acid. It is easy to form low melting substance with metal chloride. Because it has chlorine ion, it has strong corrosive. Anhydrous barium chloride is easy to absorb moisture, so it should be sealed storage. It can be used as dehydrating agent and analyze agent. It can also be used as heat processing agent in machinery processing. It is widely used in electronic industry and ceramic industry. The usage of barium chloride and anhydrous barium chloride: used as analyze agent, dehydrating agent, produce barium salt, and used in electronic, instrument, metallurgy and other industry. It is also used to produce other barium salt materials, such as: barium hydroxide, barium nitrate, barium carbonate, etc. It is widely used in papermaking, dyestuff, rubber, plastic, ceramics, oil refining, petrochemical industry, metal heat processing, etc.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
