Abstracts

Bioimpedance measuring devices are used for estimating body composition. They measure the body fat in relation to lean body mass. These devices are based on the technology of passing a bioelectrical current through the body. The bioelectrical current estimates the body fluid with the help of resistance data, which the bioelectrical current endures in the body tissue.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
