Biomass is commonly defined as renewable organic material derived from living matter (both plants and animals) excluding fossil fuel. Examples include agricultural residue (such as rice straw and sugar cane residue), food waste and animal waste. Recycling and smart use of biomass, in particular waste generated during primary production has particular economic value, such as power, construction, fertilizer etc fields.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Biomass Recycling market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Biomass Recycling industry.
