## **Abstracts**

Blockchain platforms are emerging platforms and, at this point, nearly indistinguishable in some cases from core blockchain technology. They are being used for generalized distributed value exchange, consisting of an expanding list of cryptographically signed, irrevocable transactional records shared by all participants in a network. Each record contains a time stamp and reference links to previous transactions. It is a decentralized state transition machine that manages the life cycle of digitalized assets and immutably records operations in a distributed ledger.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
