Abstracts

Bot detection and mitigation software is used by companies to defend against attacks or other unauthorized activity involving bots. Bots may attempt to take down sites and perform a DDoS attack, scrape data from a website, or perform fraudulent transactions. Bot detection and mitigation products are designed to recognize bot activity, identify malicious bots, and prevent them from engaging with websites, applications, or networks. Companies use these tools to maintain availability during attacks and prevent bots from completing their intended tasks. These tools may have similar features to DDoS protection software but bot detection and mitigation solutions defend against a variety of bot-related activities, rather than one type of attack.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Bot Detection and Mitigation Software market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
