## Abstracts

The use of brain monitoring systems has skyrocketed over the past decades. Brain monitoring systems has helped brain to gain insights of function, modulation, and pathology of the brain. The growing number of life threatening brain related neurological diseases and brain trauma injuries have led to a significant increase in the usage for EEG standard and MRI systems for brain monitoring across hospitals and clinics and other healthcare facilities.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Brain Monitoring Systems market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
