Abstracts

A Carbon Adsorber is a type of pollution control equipment that is for both physical and chemical adsorption of gas-phase pollutants.. Adsorption is a filtration method used to remove volatile organic compounds (VOCs), oil vapors, H₂S and other odors, and gas phase hydrocarbons from waste gas streams.

Adsorption involves the adhesion of pollutant gas molecules to porous solid surfaces that the contaminated air stream passes through. Physical adsorption relies on intermolecular forces while chemical adsorption involves the formation of chemical bonds.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Carbon Adsorbers market in 2020.
