The cell culture sampling devices are primarily used in biopharmaceutical industry and for research and development activities. The primary function of cell culture sampling device is to generate a suitable condition in which microorganism can grow and can produce a target product. In cell culture development, prokaryotic or eukaryotic cell is developed in specific conditions. Various benefits associated with cell culture sampling devices are less chance of contamination, system flexibility and decrease in cleaning step. These factors are anticipated to further augment the growth of cell culture sampling devices market across the globe.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
