Abstracts

Ceramic brake pads are implemented by brake shoes or calipers which press them against spinning wheels, rotors or discs to reduce speed as a result of increased friction. The materials used for brake pads or brake bands must be able to withstand the frictional force of braking as this mechanical component receives the brunt of that process.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
