Abstracts

An cervical artificial disc (also called a disc replacement, disc prosthesis or spine arthroplasty device) is a device that is implanted into the spine to imitate the functions of a normal disc (carry load and allow motion).

Some of the major factors supporting the growth of the artificial disc market include product and technological innovations; increasing incidence of degenerative disc diseases; rising propensity for minimal incision surgeries; better clinical trial results with cervical total disc replacement (C-TDR) compared to anterior cervical discectomy and fusion (ACDF); long-term cost benefits of disc replacement over the spinal fusion procedures; surging geriatric population; and rising healthcare expenditure.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Cervical Disc Prosthesis market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
