Abstracts

Chemical Deflasher is a traditional flash cleaning method involving chemicals, cryogenics such as liquid nitrogen and carbon dioxide at extremely freezing temperatures. These deflashing means can be used for molded materials such as, rubber, nylon, silicone rubber, neoprene, polypropylene, acetal and elastomers, liquid crystal polymers and more. Chemical deflashing is a method applied for removal of excess molding compounds, resins or typically known as flash from molded materials.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
