Financial planning and analysis (FP&A) solutions support the office of finance's budgeting, planning and forecasting efforts. Many also supplement the office's budgeting and planning process support with modeling, collaboration analytics and performance-reporting capabilities, to increase its ability to manage performance by linking corporate strategy and execution. The FP&A market is accelerating its shift from mature on-premises offerings to cloud solutions. New solutions built or significantly rearchitected as cloud services are typically easier to use and maintain than the previous generation of on-premises offerings. The vast majority of new FP&A sales are cloud-based. On-premises options still exist, but all vendors have greatly de-emphasized them or eliminated them entirely from their sales process. All the vendors in this market sell and support cloud-based FP&A solutions.
