Abstracts

Cloud security is the protection of data, applications, and infrastructures involved in cloud computing. One of the biggest current applications of the cloud in healthcare is data storage. The healthcare industry works with a tremendous amount of data, and even the most sophisticated hardware installations can't handle it all. Cloud networks allow healthcare professionals to store all the data they use off-site to avoid the cost and strain of maintaining physical servers.While the need for healthcare is 24/7, certain periods like the cold and flu season require more of the healthcare provider's attention. The cloud can scale to increase or decrease data storage and traffic depending on the client's needs. Thus, healthcare providers are able to fit their network requirements to match their service demands.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Cloud Security in Healthcare market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Cloud Security in Healthcare industry.
