With computer?ever have the situation where a program runs perfectly great on one machine, but then turns into a clunky mess when it is moved to the next? This has the potential to occur when migrating the software from a developer's PC to a test server, or a physical server in a company data center, to a cloud server. Issues arise when moving software due to differences between machine environments, such as the installed OS, SSL libraries, storage, security, and network topology. Container technology, also known as just a container, is a method to package an application so it can be run, with its dependencies, isolated from other processes.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Computer Container Technology market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
