Concrete is one of the most important contemporary civil engineering materials. It is made of gelling materials, granular aggregates (also called aggregates), water, and if necessary, admixtures and admixtures. Kind of artificial stone.

Concrete has the characteristics of abundant raw materials, low prices, and simple production technology, so its amount is increasing. At the same time, concrete has the characteristics of high compressive strength, good durability, and wide range of strength grades. These characteristics make it widely used, not only in various civil engineering, but also in shipbuilding, machinery industry, marine development, geothermal engineering, etc. Concrete is also an important material.
