Abstracts

Confocal microscopy offers several advantages over conventional widefield optical microscopy, including the ability to control depth of field, elimination or reduction of background information away from the focal plane (that leads to image degradation), and the capability to collect serial optical sections from thick specimens.

There are three types of confocal microscopes: laser scanning microscopes, which use a sharply focused laser that scans over the sample; spinning disk confocal microscopes, which use a disk with pinholes cut into it that are arranged in the shape of a spiral; and programmable array microscopes (PAM), which work much like the spinning disk microscopes, except that the pinholes in the PAM can be opened and closed by the user. All three types of confocal microscopes result in an image, but the spinning disk and PAM systems produce a much higher frame per second image. However, they do not allow for programmable sampling density, as the laser scanning microscope can.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Confocal Microscopes market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Confocal Microscopes industry.
