Some mineral raw material is labeled “critical” when the risks for supply shortage and their impacts on the economy are higher compared with most of the other raw materials. Two types of risks are considered: a) the 'supply risk' taking into account the political-economic stability of the producing countries, the level of concentration of production, the potential for substitution and the recycling rate; and b) the 'environmental country risk' assessing the risks that measures might be taken by countries with weak environmental performance in order to protect the environment.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Critical Mineral Raw Materials market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
