Abstracts

PET Scan is a nuclear medicine technology that USES a camera in the device to obtain multiple images of human function, providing information about health and disease. CT Scan is the use of accurate collimation of X-ray, gamma rays, ultrasound, and so on, together with the sensitivity of a very high detector around a part of the human body for a cross-sectional scan one by one.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the CT Scan and PET Scan market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
