Cytokinins are plant hormones that help in growth promoting cell division in plant shoots and roots. These growth substances are used in various end-user industries such as pharmaceutical, agricultural, biomedicine and others. Cytokinins impact the apical dominance, leaf senescence, and axillary bud growth as well in plants. Adenine type of cytokinin includes zeatin, kinetin and 6-benzylaminopurine while phenylurea type of cytokinin includes thidiazuron and diphenylurea.
