Abstracts

A demultiplexer is a type of electrical routing device and is used in both analog and digital circuitry. For inputs, it has a single signal line and for outputs it has two or more signal lines. Its purpose is to route a single input signal into a particular output channel. The channel is determined by selector inputs, which represent a unique output channel. Demuxers are often used in conjunction with multiplexers to provide a routing methodology, which saves space in a layout when there are a high amount of data channels. A mux selects from multiple inputs and route that to a single output. That output then goes to the input of the demux and be sent to a specific, selected output. In many cases, this saves a considerable amount of space.

A decoder is a device, which activates an output channel unique to a particular logical value applied to the selection lines. Demuxers can also be used as a decoder device for digital inputs. If the signal of entry is always a logical 1, then the selection lines can be used to route that value through to the appropriate output line. This type of decoder device is called a 1 to n device. Only one output channel at any specific time is routed to the input.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Demultiplexer market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the

supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
