Digital Radiography (DR) is the electronic capture of an X-ray exposure. The exposure is captured in a device that converts the X-rays to a digital signal, which is then represented on a viewing monitor for diagnosis. An image from a Digital X-ray System that appears on a viewing monitor may have come from one of two technologies, namely Computed Radiography (CR) and Direct Digital Radiography (DR) (DR/ DDR). Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Digital Radiography Equipment market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
