## **Abstracts**

Displacement measurement sensors are laser sensors which measure precisely with a measuring range of up to 1,000 mm. Due to their measurement accuracy, they are particularly suitable for use in controlling, sorting, and inspection tasks in quality control workflows and processes that have an impact on costs. Commonly measured characteristics include dimension, position, and shape.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Displacement Measurement Sensors market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Displacement Measurement Sensors industry.
