Abstracts

Dual-source Computed Tomography (CT) scanner a developed form of CT scanner, which use two separate X-ray spectra to enhance material differentiation and tissue characterization. It is designed to produce a diagnostic image of a patient's beating heart and coronary vessel without having to artificial lower their heart rate. The dual source scanner is two separate detector array acquire two different image dataset with two separate x-ray tubes operating at two different tube potentials. The two separate x-ray source allows beam filtration and adjustment of the current in each tube in order to improve image quality. Additionally, it is a type of one-stop shop which handles a broad range of application from trauma till assessments of the patients of the patients. The demand for the dual-source CT scanner has increased significantly due to increasing prevalence of different chronic diseases, rapidly developing healthcare sector and increasing need for the better medical equipment.
