Electric ship is a kind of electric vehicle, which is propelled by battery or marine generator. Solar Electric ships use solar cells on board to convert sunlight directly into electricity to generate power instead of fuel, reducing environmental impact and reducing energy consumption. The shipping industry is considered to be one of the most polluted in the world. According to the European Commission, the Maritime Transport Sector accounts for 3 per cent of global greenhouse gas emissions. With technological advancements in the battery technology, shipbuilders have been considering the use of hybrid electric boats to address this issue.
