## **Abstracts**

A electric transporter (also electric rideable, personal light electric vehicle, personal mobility device, etc) is a class of compact, mostly recent (21st century), motorised vehicle for transporting an individual at speeds that do not normally exceed 25 km/h (16 mph).

Increase in fuel prices have led to increased sales of electric transporters in the last few years. Governments are encouraging the use of electric transporters through lucrative financial and non-financial incentives such as subsidies and tax exemption.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Electric Transporters market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
