Abstracts

In the financial sector, the electronic trading platform, also known as the online trading platform, is a computer software program that can be used to place orders for financial products through the network and financial intermediaries. Various financial products can be traded through a trading platform, through a communication network with financial intermediaries or directly between participants or members of the trading platform. This includes stocks, bonds, currencies, commodities, derivatives and other products, as well as financial intermediaries such as brokers, market makers, investment banks or stock exchanges.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Electronic Trading Platform market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
