Endoscopy is a non-surgical procedure used to examine the digestive tract. In the process, a flexible tube fitted with a light bulb and a camera is inserted into the patient's organ, which is connected to a monitor. The endoscope visualization system is an advanced video system that uses a variety of endoscopic procedures as part of the system to improve the quality of images and video. The endoscope visualization system is designed with monitor, printer, monitor, light source and so on.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
