Typically, an iPaaS platform provides pre-built connectors, business rules, maps and transformations that facilitate the development of integration flows and application programming interface (API) management. Some iPaaS solution providers also offer custom development kits for linking legacy applications with mobile and social applications. Popular additional features include capabilities for managing data quality. iPaaS is often used in B2B scenarios when speedy release time is a key requirement. Although it's possible for IT departments to handle integration themselves, it is often faster and more efficient to use a third-party iPaaS provider such as Workato or Jitterbit.
