Abstracts

A Session Border Controller (SBC) is a network function which secures voice over IP (VoIP) infrastructures while providing interworking between incompatible signaling messages and media flows (sessions) from end devices or application servers.
Enterprise communications is in a state of transformation. Businesses are replacing conventional private branch exchange (PBX) systems with Voice over IP (VoIP) and Unified Communications (UC) solutions and cloud-based services to improve collaboration and productivity, as well as to contain capital and operating expenses. Today’s mobile information professionals are no longer tethered to the office phone system—they can conduct business and interact with colleagues and customers from any place, at any time.
