This Report focus on Ethylene Oxide (ETO) Sterilizers market.

Ethylene oxide (also known as EO or EtO) is a very efficient sterilizing agent. It is a bactericide, a sporicide and a viricide. It has a very favourable diffusion coefficient and can be used for thermo-sensitive or very delicate materials.

Ethylene oxide processing is widely used for the sterilization of healthcare devices and instruments. The process involves exposing products to ethylene oxide gas under vacuum in a sealed chamber. EO sterilization assures that a safe and sterile product will be delivered to the market each and every time.

Ethylene Oxide (EtO) sterilization is mainly used to sterilize medical and pharmaceutical products that cannot support conventional high temperature steam sterilization – such as devices that incorporate electronic components, plastic packaging or plastic containers.

Generally sterilization with ethylene oxide in the pharmaceutical industry has been restricted given the risk it entails due to its high mutagenic and carcinogenic properties. GMP's specify that this type of sterilization should only be used when there is no alternative sterilization technology.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the ETO Sterilizers market in 2020.
