## **Abstracts**

EPS is composed of almost single material, and therefore the sorting of it is easy and the compaction to reduce its volume by heat, solvent and /or physical compression is practicable. Thus EPS has excellent properties for recycling.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Expanded Polystyrene (EPS) Recycling market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
