## Abstracts

Explosion-proof Freezers are special refrigerators, mainly used in special environments, to store dangerous materials that are difficult to store, volatile, flammable and explosive at room temperature, such as cooling and storing pharmaceutical reagents at lower temperatures.

The Explosion-Proof Freezers are engineered to prevent triggering an explosion inside or outside the unit. The thermostat and compressor components are isolated within a vapor-proof enclosure. All electrical connections are hardwired to prevent sparking and accidental disconnection. Explosion-proof refrigerators need to meet the standards of different application areas.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Explosion-proof Freezer market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
