The extrusion head is the processing tool that shapes the extrudate i.e. the tool that determines the shape, properties, structures and dimensions of the extrudate as well as the mutual position of the elements in the extrusion process. The extrusion head is the tool with an open forming cavity i.e. the extrusion die. The extrusion head has to ensure the occurrence of proper physical and chemical processes in the polymer during its flow through the flow channels.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
