Abstracts

A ferromagnetic fluid or ferrofluid is a liquid that becomes strongly magnetized in the presence of a magnetic field. It is a new type of functional material, which has both the fluidity of a liquid and the magnetism of solid magnetic material. A stable colloidal liquid is a mixture of magnetic solid particles with a diameter of a nanometer (less than 10 nm), a base carrier (also called a medium), and a surfactant.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Ferromagnetic Fluid market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
