Abstracts

Flange Protector Band, (or Flange Band Protectors) are designed to protect flange internal areas including the flange faces, stud bolts, and gaskets, from environmental elements that can cause corrosion.

The annular gap around the OD of a flange joint is highly vulnerable to the ingress of debris and moisture that can result in the degradation of the gasket and cause corrosive damage to the flange, sealing faces and studs.

Excessive corrosion in these areas is hazardous, and replacement could mean unscheduled downtime for the machining or replacement of damaged components.

Flange protector band that provide total protection from the ingress of moisture and foreign materials. These can be installed without the need for splitting or separating the joint.

NOTE: Flange Protectors do NOT prevent lateral spray-outs, and therefore should not be used as safety devices.
