## Abstracts

This report focus on Fluoride Materials market. Fluorine is a chemical compound having high reactivity. It reacts with salt to form fluoride compound. Fluoride compounds are abundant in earth's crust and naturally found in soils and rocks. Fluoride materials have photonic and electronic properties. Exceptional characteristics of fluoride materials includes better beam durability & transparency, low refractive index, among others. They have a wide range of application across various end-use sectors such as oil & gas, construction, coatings, pharmaceutical and chemical industries and many more. Fluoride materials are prominently utilized in the ever-increasing water treatment and pharmaceutical sector and this is expected to drive the fluoride materials market across the globe.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Fluoride Materials market in 2020.
